

WALL WHALE

A G A B c o P r o d u c t

## Wall Whale Kit Installation Instructions

1. Remove four screws from your pool brush, two on each side closest to the handle. You will not reuse these screws.
2. Use the two provided hinges and determine which of the holes match the holes from the removed screws.
3. Insert the provided screws into these holes.
4. Place the hinges with the screws inserted onto the tail, matching the holes to the pins on the tail.
5. Place the Wall Whale assembly onto the brush so the screws are aligned with the screw holes on the brush. Note: The rails on the tail should be adjacent to the handle of the brush and the tail should be flipped so you can see the back of it.
6. You now have access (through the holes on the back of the tail) to use your driver to tighten the screws. The screws should be fully inserted into the brush but not over-tightened.
7. Enjoy brushing your pool the Wall Whale way. No more bending and scrubbing (and scrubbing...) Simply push down with one hand and let the Wall Whale do the work for you.
